

Corrected DW-4 temperature-transfer results. The target is the held-out $\beta = 1.0$ distribution, with FM trained at $\beta \in \{0.8, 1.2\}$. Lower is better.

Method	Geo W_2 (2k)	Pair-distance W_2 (20k)	$E(\cdot)W_2$ (20k)
Direct FM (shared seed 0)	0.155135	0.055866	0.748119
AM (seeds 1–3; shared FM)	0.137861 $\pm$ 0.000054	0.035973 $\pm$ 0.000096	0.359301 $\pm$ 0.000981
Ref. vs Ref. floor	0.128256 $\pm$ 0.006028	0.003481 $\pm$ 0.000979	0.040157 $\pm$ 0.010158

AM uncertainty is the sample standard deviation across three independent AM optimization seeds conditioned on one shared FM seed-0 controller; it is not end-to-end three-seed uncertainty. Reference floors compare independent corrected SMC train/eval splits. All three AM seeds improve all three reported metrics. Literature baselines evaluated against the rejected DW-4 ULA reference are omitted pending rescoring. Corrected-reference LJ-13 is reported separately as a conditional negative result: none of three AM seeds sharing one FM seed improves either Energy or Geo W_2 .
